

Some bugs are resting on a flat elastic sheet. The bugs form a P-shape (below).

The sheet is stretched uniformly and soon the distance between each bug has doubled. This (below, right) shows how the bugs' positions have changed, *from D's viewpoint*.

- What has happened to the P-shape?
- Draw how the bugs' positions have changed, *from E's viewpoint*.
- Where is the centre of enlargement of the sheet?
